

2020 Enviva Forest Conservation Fund

Protecting Bottomland/Wetland Forests in the Coastal Plain of Virginia and North Carolina

The U.S. Endowment for Forestry and Communities (Endowment) seeks applications for the 2020 Enviva Forest Conservation Fund. This opportunity closes **January 24, 2020 at 5:00 p.m. EST**. Proposals received after this time may not be considered.

Funding

Up to \$500,000 is available for the 2020 grant round. Funding at this level is anticipated on an annual basis at or around this time each year through 2025. A review committee will make final project selections. Funding is provided by Enviva Partners, LP. Learn more at envivaforestfund.org.

What's New for 2020?

With the success of the previous rounds of grants, the Enviva Forest Conservation Fund would like to showcase their grantees' achievements. In order to easily highlight these accomplishments, applicants must provide photographs of the land with their application. If selected, grantees will also be asked to provide quotes from landowners. This year more emphasis will be placed on forest type so be sure to include a detailed breakdown of forest type in your application. For 2020 grantees, annual updates on project progress will be required. If funded, annual updates will be required every year for a period not to exceed 5 years.

Enviva Forest Conservation Fund Goal

The Enviva Forest Conservation Fund's goal is to permanently protect environmentally sensitive priority bottomland/wetland forests. These forests offer a wide range of economic and environmental benefits, but they face a number of potential threats, including conversion to non-forest uses. The Enviva Forest Conservation Fund targets priority forest areas that have been identified by the Endowment in consultation with other respected organizations.

The Enviva Forest Conservation Fund will consider a variety of protection strategies, including purchasing land via fee or conservation easement. The importance of active forest management for appropriate properties is recognized. Proposals that include sustainable forest management, or a mix of management and preservation, are desirable. Applications that are outside of the original watershed area but border priority conservation areas within targeted areas may still be eligible for funding.

Geography

Proposals will be accepted for bottomland/wetland forest projects in the following counties:*

Virginia: Brunswick, Chesapeake, Dinwiddie, Greensville, Isle of Wright, Lunenburg, Mecklenburg, Prince George, Southampton, Suffolk, Surrey, Sussex, Virginia Beach

North Carolina: Anson, Beaufort, Bertie, Bladen, Brunswick, Camden, Chowan, Columbus, Craven, Cumberland, Duplin, Edgecombe, Franklin, Gates, Granville, Greene, Halifax, Harnett, Hoke, Hertford, Johnston, Jones, Lee, Lenoir, Martin, Moore, Nash, New Hanover, Northampton, Onslow, Pasquotank, Pender, Pitt, Perquimans, Richmond, Robeson, Sampson, Scotland, Stanley, Tyrrell, Vance, Wake, Warren, Washington, Wayne, Wilson

*Note: Projects that are partly in the eligible counties and partly in adjoining counties may be considered for funding if they address the Fund's priorities.

Priority Conservation Forest Types

The Endowment has identified four distinct bottomland forest ecosystems that are especially worthy of protection and that Enviva has agreed to work to conserve in collaboration with forest owners:

- Cypress-tupelo swamps: Characterized by saturated soils during the growing season and standing water during certain times of the year, these include various species of bald cypress (*Taxodium distichum*) and water tupelo (*Nyssa aquatic*).
- Atlantic white cedar (*Chamaecyparis thyoides*) stands: This species grows on wet sites at altitudes up to 50 meters above sea level.
- Pocosins: One of the South's rarest wetlands, low Pocosins are dominated by small trees and shrubs and have a high water table. The word "pocosin" is from the Algonquin Native American word for "swamp on a hill."
- Carolina bays: Called "bays," they are not ocean inlets but are geological depressions usually surrounded by a variety of bay trees, including red and sweet bays.

Endorsements

A priority for the Enviva Forest Conservation Fund is to accelerate implementation of existing conservation plans that have been developed collaboratively by local partners. Applicants should provide at least two but not more than five letters from relevant partners demonstrating their awareness of and support for your project. Project partners should be explicit in describing how the applicant's proposed project integrates with and preferably leverages existing conservation plans. Such groups might include state departments of natural resources and forestry, state or regional offices of federal natural resource agencies, and non-governmental conservation groups with a significant presence in Virginia and North Carolina.

Applicants should provide at least 50% of the total project cost. This may include cash donations or in-kind contributions from third-parties. Federal and non-federal funds may be considered as match.

Leverage

Applications that leverage other financial resources for larger-scale outcomes are highly desirable. For example, proposals that tap into other sources of private or public funds to maximize acres protected will receive priority consideration.

Eligible Applicants

Not-for-profit 501(c)(3) organizations, tribes, and federal, state, and local government agencies are eligible for funding. Unincorporated individuals are not eligible. Public/private partnerships are particularly desirable.

Program Criteria

Eight primary criteria are considered in evaluating applications. Please address the following in your application:

- Ecological quality of tract and associated conservation values (quantified, if possible), such as benefits for cypress-tupelo, Atlantic white cedar, pocosins, and/or Carolina bays;
- Immediacy of threat to the site;
- Link(s) to other protected areas or inclusion within established conservation plans;
- Financial leverage and cost-effectiveness of proposal;
- Scale of forests protected (acres, miles of streamside zones);
- Adequacy of active forest management plans (if applicable);
- Partner history of accomplishment in the area; and
- Benefits to family forest owners, if any.

2020 Process Schedule

The Endowment will coordinate a proposal review committee and will engage successful applicants in contracting at the earliest possible time. The proposal deadline is January 24, 2020 at 5 p.m. EST. Applicants will be notified no later than April 2020. Contracting should be completed within four to eight weeks after applicants are notified unless complications arise. The Endowment administers grants for the Enviva Forest Conservation Fund.

Application Assistance

For questions or clarification please contact Alicia Cramer (alicia@usendowment.org)

Proposal Submission

Only proposals submitted electronically to alicia@usendowment.org on the [Endowment's PDF proposal form](#) will be accepted.

Publicizing the Grants

The Enviva Forest Conservation Fund has attracted significant interest from community leaders, elected officials and the media. Grant recipients will be asked to coordinate with the Endowment and Enviva to announce 2020 grant awards and, at the appropriate time, to provide the local community and conservation interests with more details about the project and the types of management and conservation taking place. Applicants must agree to provide photographs of the land, along with quotes from landowners, to share with the public upon request.
